

Predicting **Drug Use** with *Machine Learning*

❖ Drug Related Deaths: 1999-2017

Source: [cdc.gov](https://www.cdc.gov)

National Institute
on Drug Abuse

*"Research has shown that brain development continues into a person's 20s, and that age of drug initiation is a very important risk factor for developing addiction. This underscores the importance of **drug use prevention and screening** for substance use or misuse among adolescents and young adults.*

--Emily B. Einstein, Ph.D., chief of NIDA's Science Policy Branch

❖ Data

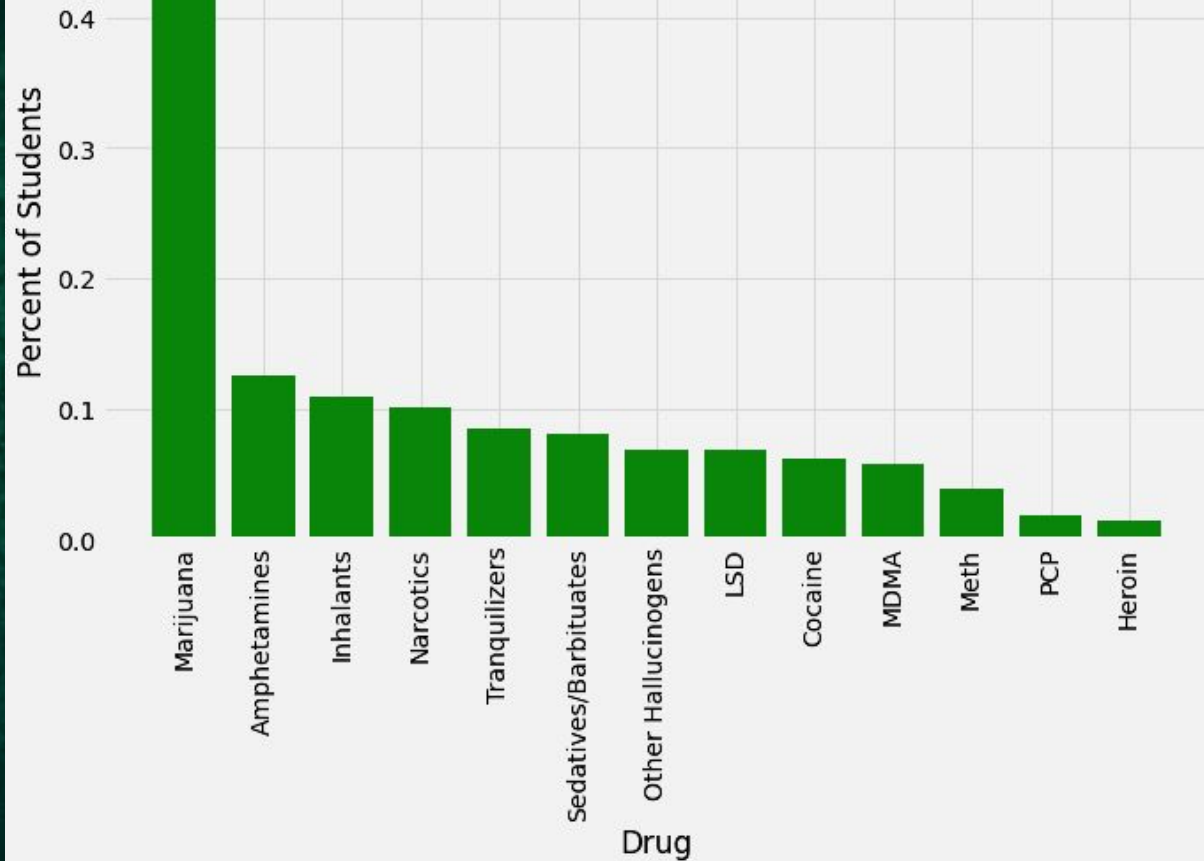

101,628 *Surveys*

133 *Schools*

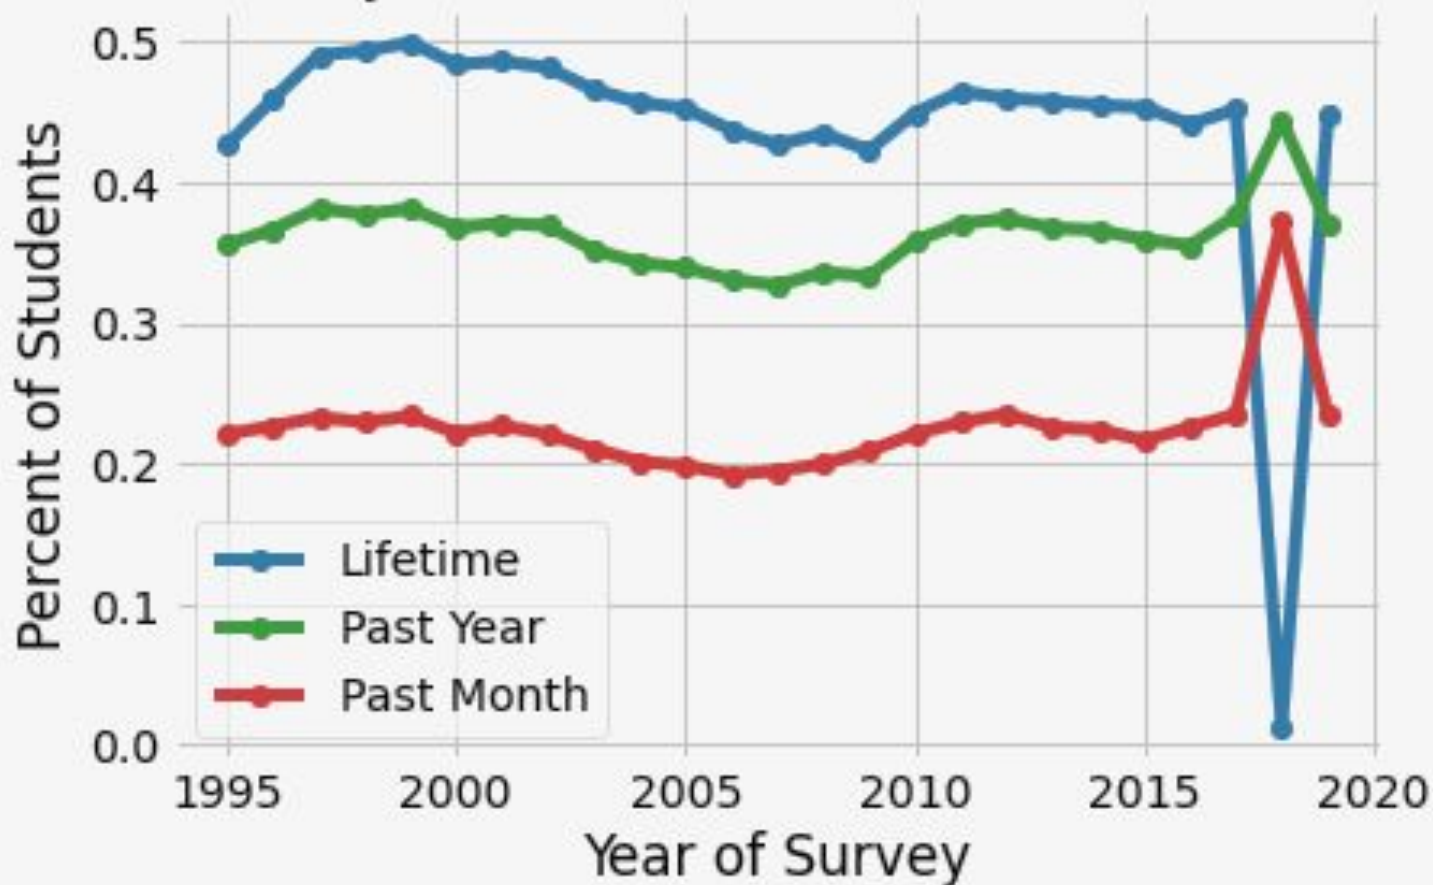

48 *Questions*

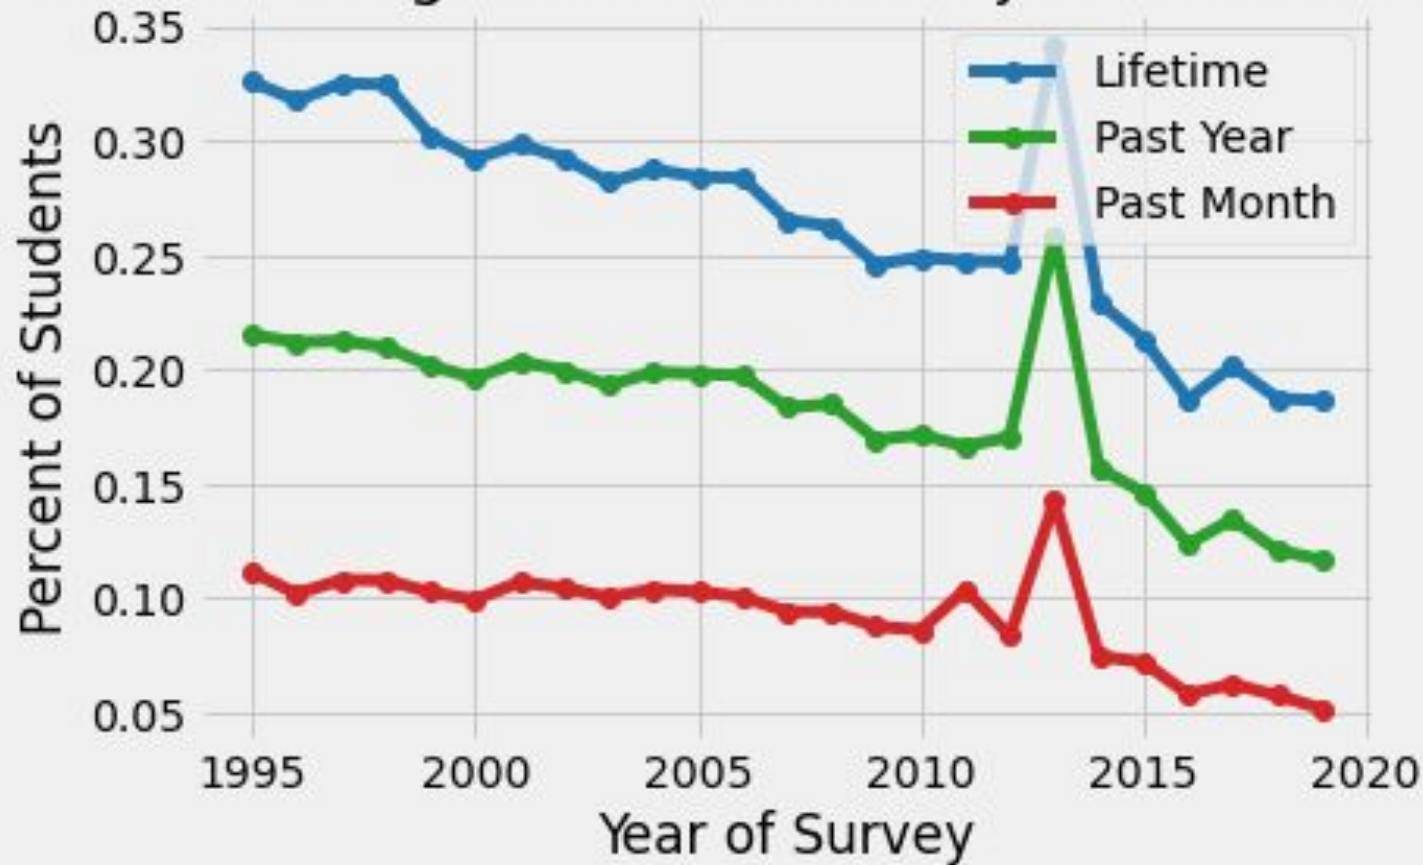

Adolescent Drug Usage

Marijuana/Hash Users: 1995-2019

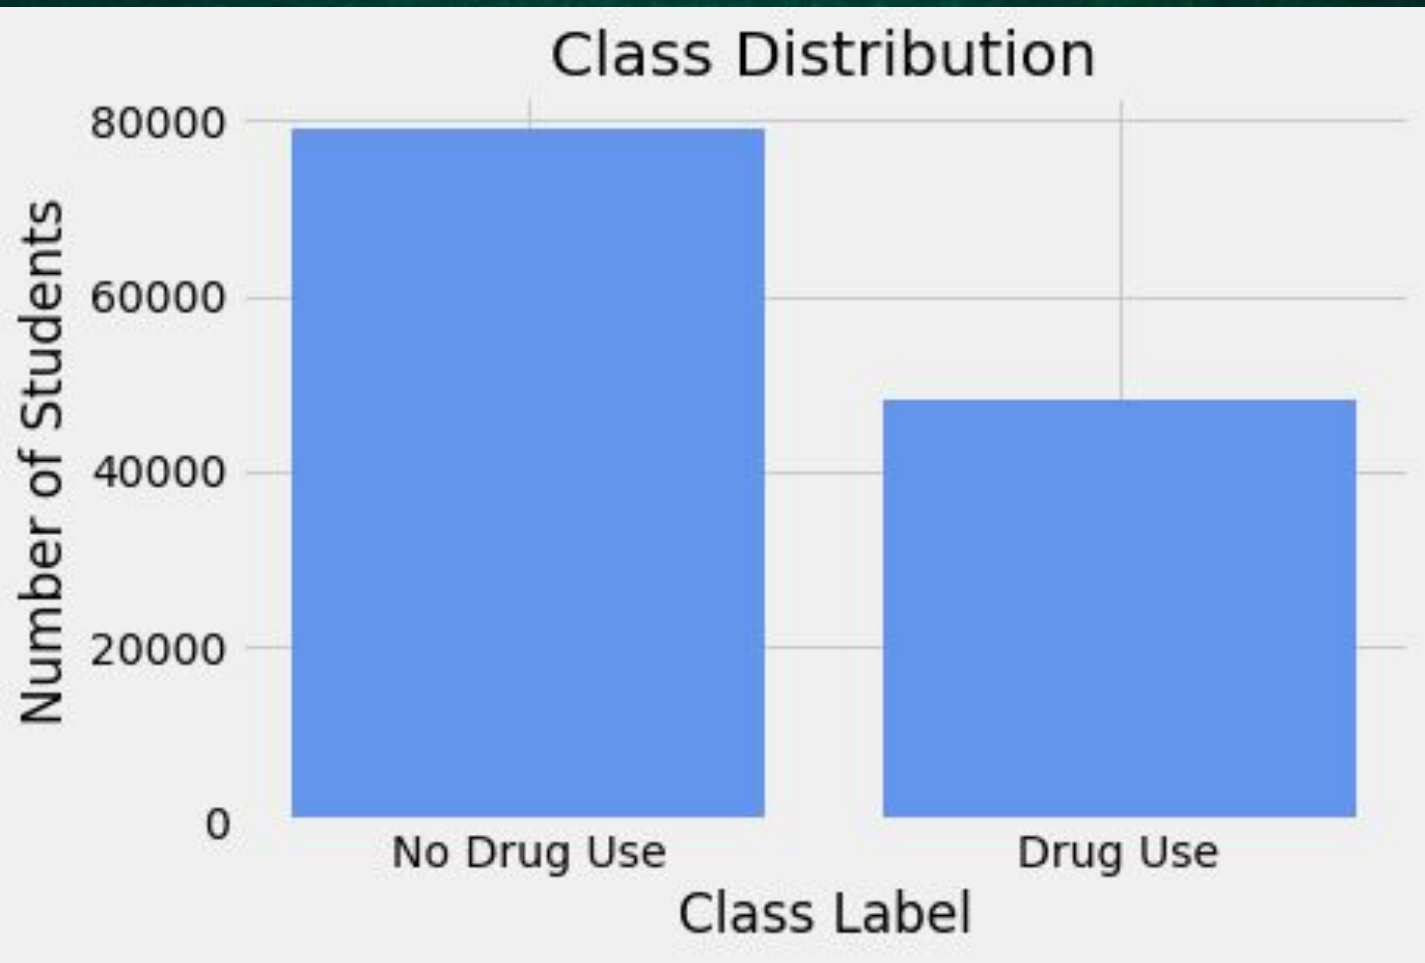

Users of Drugs Other than Marijuana: 1995-2019

❖ Target:

“Have you used
any illicit drugs in
the past *year*?”

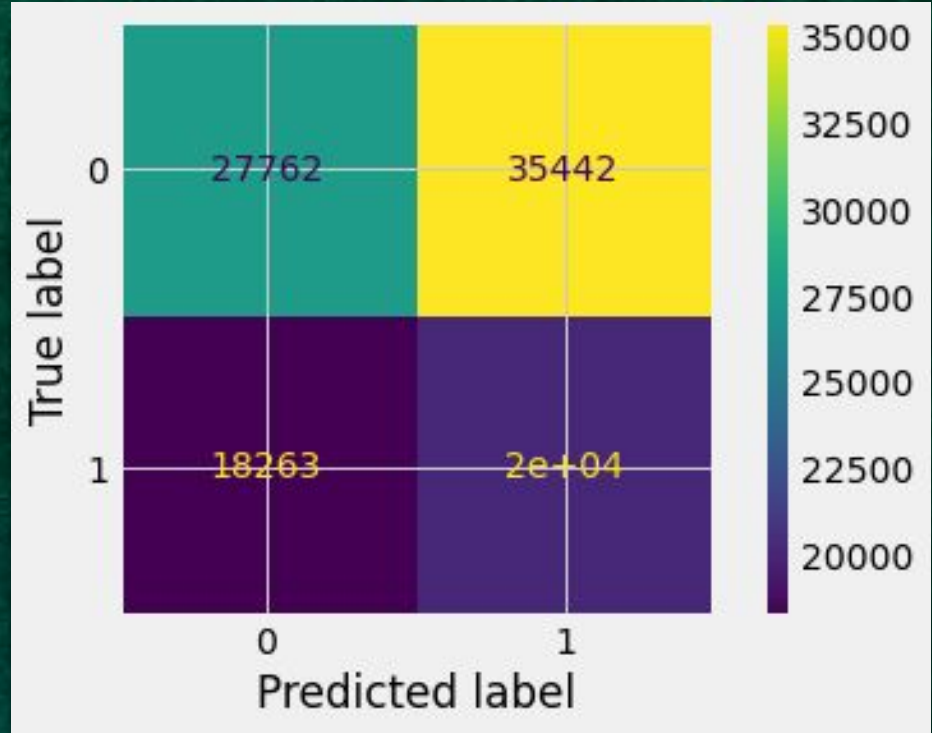

❖ First Simple Model

Decision Tree

61% Recall

70% Accuracy

❖ Final Model

Logistic Regression

72% Recall

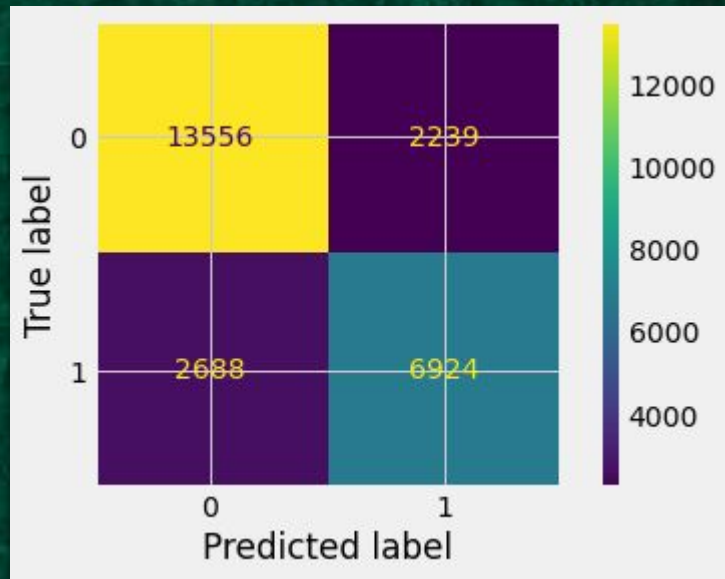

80.6% Accuracy

Positive Features

1. Year = 2019 (**1.12**)
2. Year = 2015 (**0.71**)
3. Consumed Alcohol 40+ times in past year (**0.66**)

Negative Features

1. Consumed NO Alcohol in past year (-1.04)
2. Never Smoked a Cigarette (-1)
3. Grew up on a Farm (-0.58)

❖ Next Steps

- Further Subsetting
- Studying Age
- Neural Network

Thank you!
